
Affidea Shines on the Eurosafe Wall of Stars: A Testament to Excellence in Radiology

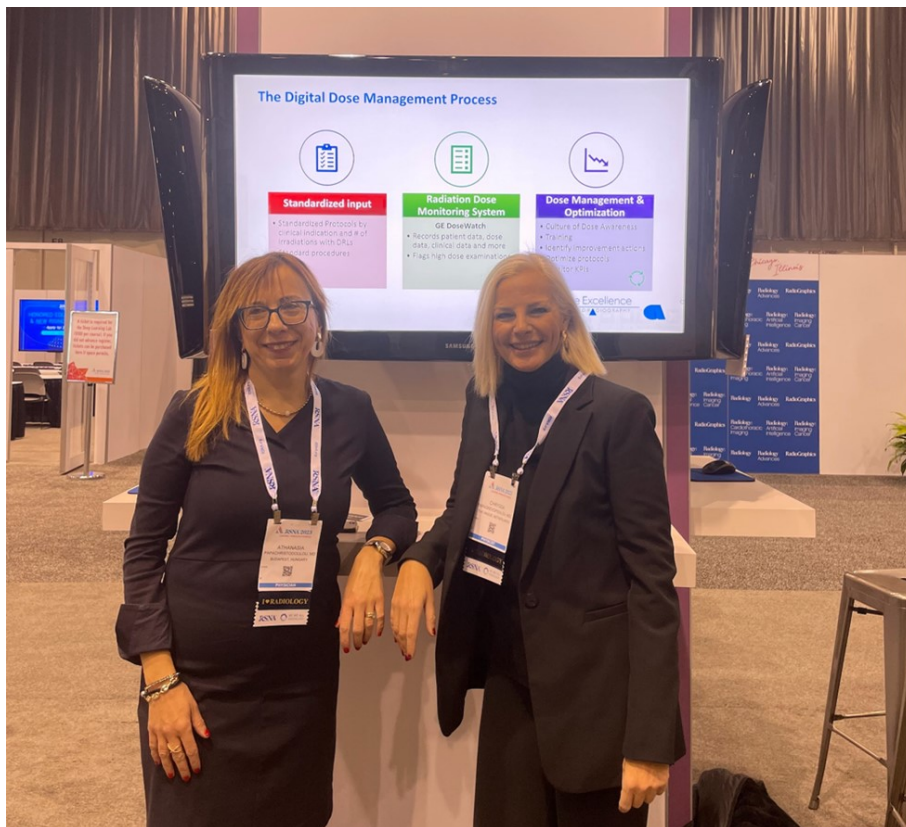

[Affidea](#) has earned significant recognition on the Eurosafe Wall of Stars, a direct result of the company's innovative Dose Excellence Programme, which has set new standards in radiology.

The Dose Excellence Programme at Affidea stands out for several reasons. Firstly, an impressive 80% of Affidea's equipment fleet is integrated with the Digital Dose Excellence system, while 94% of total examinations across the group adhere to a standard protocol, ensuring uniformity and quality in diagnostics. This integration underscores the organisation's dedication to adopting advanced technologies for superior patient care.

Furthermore, in 2023 Affidea has made significant strides in radiation safety. More than 87% of examinations are performed with a dose below the organisational reference levels for patients with a normal Body Mass Index (BMI), highlighting the company's commitment to minimising patient exposure to radiation.

In a notable achievement, 103 Affidea centers have been awarded five stars and are featured on the Wall of Stars. This recognition showcases not only Affidea's excellence in radiology but also its leadership in the field, with more than 90% of the centres recognised by the European Society of Radiology on the Eurosafe Wall of Stars being Affidea centres.

Adding to these recognitions, we have proudly presented our Dose Excellence Programme at RSNA, the largest world radiology congress.

Chryssa Paraskevopoulou, our Group Dose Management & Radiation Protection Manager and a driving force behind our Dose Excellence Programme presented at RSNA and stated: "Affidea's Dose Excellence is more than a programme, it represents a paradigm shift in healthcare. We have meticulously crafted a comprehensive approach that marries state-of-the-art technology with clinical precision, ensuring that each patient receives the safest and most effective care possible."

Setting Affidea apart is its pioneering approach to real-time data monitoring. The company takes pride in being the only healthcare provider in Europe with the ability to record and monitor radiation dose data across all CT systems, patients, and countries where it operates. This commitment goes beyond mere data collection; it enables the personalisation of radiation doses for each patient through innovative digital software, enhancing the precision and safety of care provided.

Dr Alessandro Roncacci, SVP Chief Medical Officer, said: "Our pursuit of excellence in radiology and patient safety is clearly reflected in the success of our Dose Excellence Programme. The recognition we've received on the Eurosafe Wall of Stars is not just a testament to our technological advancements but also to our commitment to setting new standards in healthcare. Every step we take is guided by our core principle of putting patient well-being at the forefront, ensuring that each person receives the highest quality of care with the utmost safety."
