### ARROWg+ard Antimicrobial Catheter Technology: New Generation Now Available in Europe

---

[www.arrowintl.com](http://www.arrowintl.com)

On October 1st, 2006 Arrow International received CE mark clearance for its ARROWg+ard Blue PLUS new catheter generation with Chlorhexidine along the entire intraluminal path and increased levels of Chlorhexidine on the catheter's external surface for better protection. Chlorhexidine-silver sulfadiazine is a CDC level 1B recommendation for the prevention of infection, for implementation and is supported by experimental, clinical and epidemiological studies.
