

CIRSE 2010 Announced for 2 – 6 October, Valencia, Spain

CIRSE invites you to attend its annual meeting and postgraduate course, billed as the “world’s top platform for specialists in all minimally invasive image-guided procedures”. The programme has been designed around seven main themes:

- Vascular Interventions;
- Transcatheter Embolisation;
- Non-Vascular Interventions;
- Interventional Oncology;
- Neuro Interventions;
- Clinical Practice Development, and
- Imaging.

The concept of main topics running parallel to avoid overlap has been further expanded, adding neuro-interventions as the seventh topic in addition to transcatheter embolisation, non-vascular interventions, interventional oncology, vascular interventions, clinical practice and imaging.

Another novelty at CIRSE 2010 will be a series of workshops organised in cooperation with the European Federation of Radiographer Societies. With this initiative, CIRSE is trying to establish closer ties with the allies who help provide optimal patient care on a daily basis.
