
Cook Medical at WAMM 2019 - Helping you manage the difficult airway

We've designed our airway management products to help successful intubation, airway exchange, emergency airway access, and extubation procedures. Our introducers help provide oxygen during the initial intubation and can assist with blind, retrograde, and bronchoscopic-guided placement.

Our radiopaque exchange catheters are available in a range of sizes and are hollow to allow oxygen delivery during exchange. By maintaining continuous airway access, our products can reduce the chance for adverse patient outcomes due to oxygen deprivation.

We also offer a variety of emergency cricothyrotomy sets for use with Seldinger or surgical methods.

Our extubation set features an extubation wire and reintubation catheter for use in staged extubation. The soft, kink-resistant nitinol wire core provides a track for the reintubation catheter, and the catheter permits oxygen delivery to facilitate a successful reintubation if one is required.

Visit booth 18 to learn more about our products or visit cookairway.eu/WAMM for additional information.
