
Cook Medical TriForce® Peripheral Crossing Set Now Available In The United States

[Cook Medical's TriForce®](#) Peripheral Crossing Set is now commercially available. As of January 2020, these products are available to physicians in the United States to support procedures to treat patients with vascular obstructions.

The TriForce Peripheral Crossing Set is designed to be percutaneously introduced into blood vessels and support a wire guide while performing a peripheral intervention. This device is also intended for injection of radiopaque contrast media for the purpose of angiography. TriForce is offered in two lengths and four configurations, which means physicians have several product options to treat blocked or restricted vessels in a variety of locations in the body.

Mark Breedlove, vice president of Cook Medical's Vascular division, said, "We are excited to have this tool available for our physicians to treat complex peripheral vascular disease."
