

## **CORDIS Launches EU Project Service for Researchers**

The European Union has some of the world's best research facilities and most accomplished researchers. Harnessing their full potential will help turn novel ideas into jobs, green growth and social progress. To facilitate this, the European Commission finances, either wholly or partially, a wide range of individual research and technology development projects. Details about many of these can be found on the Community Research and Development Information Service (CORDIS) - the primary information source for EU-funded projects.

A new Projects Service, launched on 16 January 2012, will enhance the role of CORDIS. Designed not only to be a comprehensive reference point for project participants, coordinators and stakeholders, the service will also make information and data available to wider audiences.

CORDIS has project records covering a myriad of science, technology and research-related fields and topics. Dating from before 1986 to the present, they relate to not only the Seventh Framework Programme (FP7), but also previous Framework Programmes. The new service will use the breadth of the CORDIS repository as a base to bring together a wide variety of information related to individual projects, including:

- project details such as description, funding, programme;
- project results such as documents, reports, summaries;
- links;
- publications;
- multimedia;
- information and details on project participants.

The new Projects Service will unlock content, standardise the presentation of project information, and help users to find out more.

Project records are added to the database once they are made available to CORDIS by the Commission service responsible. The new service provides tools and pointers that can help filter and facilitate search queries.

Even when a project has finished, specific project information can help with result development, the planning of new initiatives, the indication of new research avenues and more.
