The report identified **100 CEOs and board members who are engaging with AI for their business**.

According to the report, most are concentrated in Germany, the U.S.A. and Japan and these countries are tipped to become AI research and **innovation hubs**.

“The AI leaders have **interdisciplinary skills in both business and technology**,” researchers said. “The objective of this report is to establish a benchmark. In the future we expect to observe a correlation between such benchmarking and market and investment prospects with the level of [AI commitment](#) serving as an indicator of market capitalisation growth.”

Researchers said the [deployment of AI](#) meant deeper and **more effective business analysis** and, ultimately, outperformance in the specified sector.
