

ECR 2014: Aycan to Present Latest Innovations

From 6th to 10th March 2014 the European Congress of Radiology (ECR), organized by the European Society of Radiology (ESR), will be held again in Vienna. Visitors are travelling from all around the world to visit Europe's biggest medical imaging meeting with its accompanying exhibition, numerous lectures and seminars.

aycan will present its latest products such as the iPad App aycan mobile, the vendor-neutral DICOM PACS archive aycan store or the aycan OsiriX PRO workstation.

The turnkey workstation with FDA 510(k) approval, CE marking and full integration-service and customer support offers conventional, multi-slice and other image reading support. While aycan is providing its 64-bit DICOM PACS workstation in different package versions, users get to use a specially optimised workstation for specific areas, such as Oncology or Vascular Surgery. Each package version is characterised by certain plug-ins, which are precisely matched to the appropriate area.

Thus, with the aycan OsiriX PRO Vessel Analysis Workstation, aycan provides segmentation of arteries in CTA datasets as well as centerlines for vessel assessment. The aycan OsiriX PRO Oncology Workstation helps the user in doing evaluation according RECIST 1.1 guideline.

In addition to the booth, aycan will also participate in the Multimedia Classroom, which is offered for the first time at ECR. During the Multimedia Classroom the participants will learn to interpret cases of CT coronary angiography, CT colonography, as well as oncologic and emergency CT imaging on 30 to 50 workstations from different vendors.
