FDA Clears Innovative DRX-1 System From Carestream Health

With this clearance, Carestream Health can begin taking orders for the product in the US. Shipping will begin in the next several weeks, following trade trials and other advance preparations that are underway.

The CARESTREAM DRX-1 System incorporates a console and a wireless 14 x 17 inch (35 x 43 cm) cassette-size DR detector that provides a rapid, affordable conversion for users of radiographic film or computed radiography (CR) systems. Since the system requires no modifications to existing film-based equipment, installation costs are modest
