

## **Fletcher Allen Healthcare Invests in Barco**

---

With the assistance of integration partner McKesson, installation of the Corionis Fusion 6MP (MegaPixel) color displays began in early 2009. The existing McKesson workstation monitors were all replaced with a pair of Barco 6MP monitors.

Fletcher Allen Health Care's purchase of the Barco Corionis Fusion 6MP DL color display provides an all-in-one solution for the radiology department's diagnostic workstations, enabling increased versatility and improved workflow. According to George M. Ebert, MD, PhD, Vice Chair of Imaging Technology, Director of Radiology Informatics at Fletcher Allen Health Care and Associate Professor of Radiology, University of Vermont College of Medicine, the facility needed to find the most advanced diagnostic monitors to match their highly advanced imaging equipment.
