
Future Development of Generative AI in Neurology

GenAI has the potential to transform neurology, from earlier diagnoses and tailored treatments to faster research breakthroughs and more efficient clinical workflows. But its future depends on the insights and experiences of healthcare professionals like you.

By completing a short questionnaire, you can:

- Share your perspective on the barriers, opportunities, and challenges in adopting GenAI in neurology.
- Influence how GenAI tools are developed, validated, and integrated into clinical practice.
- Present your vision of how technology can enhance patient outcomes while respecting ethics, trust, and real-world workflows.

Your input will help guide responsible and impactful use of GenAI in neurology. Please fill out this questionnaire and be part of shaping the next chapter in neurological care.

Access the questionnaire here: <https://iii.hm/genai1>

We thank you for your participation!
