

GE Healthcare Brivo Plus C-arm Cleared for USA

GE Healthcare has announced FDA 510(k) clearance of its latest Brivo Plus C-arm, now available in the U.S. With legacy OEC image quality and ease-of-use, the affordability and reliability of this new Brivo C-arm will offer a high quality option for basic surgical imaging.

The Brivo Plus uses enhancements and extras — such as Advanced Clear Intelligence imaging, an intuitive user interface, and wireless connectivity.

“We’re thrilled to bring our line of Brivo C-arms to the U.S. with the new OEC Brivo Plus,” said Jim Corrigan, President & CEO of GE Healthcare Surgery. “The C-arm offers an affordable solution without sacrificing the technology and innovation OEC is known for. With its compact design and easy manoeuvrability, the OEC Brivo Plus is a great option for our customers in surgery centres and facilities that need an easy-to-use, accurate mobile C-arm.”

This point and shoot C-arm has automated features that deliver quality imaging at a clinician's fingertips, enabling optimal image acquisition with fewer re-takes. With new advancements in steering and lightweight construction, the C-arm's compact design makes it easy to guide into space-constrained operating or procedure rooms. Brivo's seamless connectivity and easy data management can help clinicians boost productivity, including the use of wireless capabilities to ensure the fast transfer and protection of data.
