GE Healthcare Introduces Online Education for Nurses

GE Healthcare, a unit of General Electric, has announced a cost-effective, subscription-based library of online courses for nurses to learn and receive continuing education credit in clinical, leadership and development to help improve patient outcomes and in some cases lower costs.

Aimed at general practice registered nurses and those in specialty fields such as obstetrics, telemetry, emergency and critical care, this library of online courses focuses on current and relevant topics for nurses.

"GE is the only medical device manufacturer that offers such a diverse, flexible and open educational program for nurses," said Jenne Meyer, marketing leader for GE Healthcare's Education Services. "We continue to hear from nurses about the need for better education on all levels to help them perform better at their jobs, and this flexible, convenient solution is one way GE Healthcare can assist."

GE's nursing library of online education is available 24 hours a day, 7 days a week for nurses to further their education and stay up to date on new therapies, keep their licenses current and ultimately improve the quality of patient care. The library is continuously updated with new courses about topics of interest for nurses.
