
GE Healthcare Unveils LOGIQ E9 at MEDICA

The innovative system allows live ultrasound images to be combined with archived computer tomography (CT) or magnetic resonance tomography (MRT) volume data during the sonography investigation itself. As a result, several imaging methods can be utilised simultaneously, providing the significant advantage of greater diagnostic certainty. The LOGIQ E9 also uses new technology known as amplitude modulation for displaying contrast agents. At the core of the LOGIQ E9 is GE Healthcare
