# German Hospital Group Invests in Sectra PACS and VNA

The German hospital group Gesundheit Nordhessen is investing in a medical IT solution from Sectra for handling radiology images as well as non-radiology images across the group's four hospitals. Sectra's enterprise imaging solution (PACS and VNA) will improve the availability and simplify the communication of patient images. This makes it easier for radiologists and other physicians to carry out their daily work, thereby contributing to more efficient care. In addition, using one single system for image handling across several hospitals and multiple departments also enhances efficiency for the IT department.

Gesundheit Nordhessen Holding AG is a regional healthcare group and includes four hospitals as well as rehabilitation centers and senior residences. The hospital group is a regional market leader for acute care and the group offers health services for over 73,000 inpatients and 200,000 out-patients annually.

"With Sectra, we have found the most efficient enterprise imaging solution for us. The solution will enable our radiologists and physicians to work within the same system regardless of their location, sharing both information and workload. This will create significant progress towards our constant goal of improving patient care," says PD Dr Thomas Lehnert, Head of the radiology department at Gesundheit Nordhessen.

Sectra at RSNA 2016
Meet Sectra at the RSNA trade show in Chicago, starting on November 27. Visit us at booth #6113 and experience Sectra's view of patient-centered cancer care and find out how we support radiology in exceeding the expectations of referring physicians and their patients. Read more and book a meeting at www.sectra.com/RSNA .
