

Kodak Introduces Automated Quality Control Tool for Use With Its CR Systems in Mammography Applications

This new automated quality control software package, which will be available in the third quarter, is based on the existing KODAK DIRECTVIEW Total Quality Tool used by healthcare providers worldwide to verify the performance of KODAK CR systems and cassettes for general radiography exams.

Kodak offers mammography functionality as an optional feature on its KODAK DIRECTVIEW CR 850, CR 950 and CR 975 Systems outside the United States and Canada.
