Matrox Display Controller Boards RoHS-Compliant

Matrox Graphics Inc. Display controller boards, including the Matrox MED Series, RAD Series, TheatreVUE Series and AuroraVX Series have been shipping as RoHS-compliant boards over the last few months.

The European Parliament and the Council of the European Union adopted a Directive on the restriction of the use of certain hazardous substances in electrical and electronic equipment, known as the RoHS Directive. This Directive will restrict placement on the EU market of electrical and electronic equipment containing lead, mercury, cadmium, hexavalent chromium, PBB, and PBDE as of July 1st, 2006.

Matrox RoHS-compliant medical display controller boards are form, fit and function equivalent to their non-RoHS-compliant counterparts, and are drop-in compatible. Existing Matrox software, drivers and graphic BIOS operate transparently with the RoHS-compliant versions.
