**New Products Featured at RSNA 2004**

At RSNA 2004 (Chicago IL. USA), Matrox Medical Imaging featured its latest products, including the new RAD2mp PCI Express board, providing accelerated performance and flexible display options. Also shown at RSNA was Matrox's latest RAD2mp Low Profile board, designed for medical environments where space is limited, but performance is still paramount. In addition to these new technologies, Matrox demonstrated its MED Series, RAD Series and TheatreVUE Series boards in a variety of display resolutions such as 2 MP, 3 MP and 5 MP.

Matrox also highlighted its various display and software partners in its booth at RSNA, who had their own technology to show, such as FIMI Philip's new SmartPivot technology, which sets the orientation of an image by flipping a display panel. Also present in Matrox's booth was Lariviere's calibration system on the Matrox TheatreVUE board, and Logical Solutions' DVI X-tender paired with the Matrox MED5mp display controller board, extending the digital display signal over 1 Km.
