

Medicus IT Partners with Eagle Physicians & Associates to Drive Digital Transformation with mCare™

Medicus IT, a leading innovator in IT solutions for the healthcare industry, is thrilled to announce its partnership with Eagle Physicians & Associates PA, a forward-thinking healthcare organization dedicated to delivering exceptional patient care. This collaboration marks a significant milestone in both organization's commitment to innovation and excellence in healthcare IT infrastructure.

By leveraging Medicus' expertise in healthcare IT solutions and its next-generation managed services offering, Eagle Physicians sees this partnership as one that aims to drive efficiency, improve outcomes, and ensure data security in the healthcare ecosystem with a focus on patient experience.

Medicus has been providing managed services for over twenty-five years that include IT helpdesk support, advanced engineering, infrastructure monitoring, remediation, management services, application support, and strategic Virtual Technology Executive™ (VTE) consulting services.

"Recognizing our past tendency to reactively address IT challenges without fully achieving comprehensive solutions as we rapidly grew our organization, we eagerly anticipate leveraging the extensive capabilities of Medicus' proficient and dedicated support team," said Sheri Raymer, CEO Eagle Physicians. "Collaborating with Medicus marks a significant milestone for us. Their commitment to excellence and expertise closely aligns with our vision for digital innovation and success which can only position us for future growth."

The basic premise of mCare™ is that healthcare organizations need a managed service solution designed explicitly for the healthcare industry, and managed service providers must have deep experience and expertise in healthcare information technology to address today's needs.

"Why would a healthcare organization work with an IT generalist?" asked Chris Jann, CEO of Medicus. "Seeking guidance on nuanced IT challenges in healthcare without specialized help is like relying on a generalist physician for a condition that requires a cardiologist's expertise. Managing IT for healthcare requires the specialized knowledge of experts who are not only versed in technology but are also deeply familiar with the unique demands of the healthcare technology ecosystem. This is where Medicus IT stands out."

Medicus' mCare™ managed services are built for healthcare:

- Simplified pricing model
- Easy to consume and mapped to healthcare security and compliance requirements
- Improved baseline security measures for growth and scalability
- Flexible customization for evolving healthcare demands, including advanced security and compliance, application support and workflow services, and Virtual Technology Executive™ (VTE) services for comprehensive IT solutions.

"We are thrilled to embark on this transformative journey with Eagle Physicians. Together, we will refine their IT landscape, driving efficiency, security, and agility to unlock new growth opportunities. Our mCare is simple for our clients to understand and we made it even easier for them to consume and increase their security posture at their own pace; while adding essential solutions that all healthcare organizations require," said Chris Jann, CEO of Medicus IT.
