Misys Healthcare Systems, CoPathPlus Product

University College London Hospitals (UCLH) NHS Foundation Trust has selected CoPathPlus® from Misys as its anatomic pathology information system to replace their legacy application. UCLH joins a growing number of other Trusts and healthcare institutions in the UK, Ireland, Denmark and the Middle East already utilizing CoPathPlus, continuing to reinforce Misys as one of the leading suppliers of clinical information system software internationally.

Already a user of Misys Laboratory™ software throughout their other pathology disciplines, UCLH operates a world-renowned laboratory that includes specialist services handling specimens from all over the globe. UCLH conducted a thorough appraisal of available pathology system solutions on the market before electing to invest in Misys.

Designed to meet the unique workflow requirements of the anatomic pathology department, CoPathPlus provides patient and specimen information viewable in a variety of formats. CoPathPlus' flexible integration technology allows fast and cost-efficient implementation and smooth migration of legacy pathology data with minimal disruption.
