

Rhesus Healthcare to Partner CathMedical's Picasso CIS

Rhesus Healthcare is pleased to announce it has signed a global partnership agreement, for the promotion and sales of the Picasso cath lab monitoring and information system. The newly available Windows™ based Picasso Cardiac solution was developed by CathMedical –Spain, which includes an iPad™ or Windows™ 7 tablet PC remote operating system. Both Rhesus Healthcare and CathMedical recognise the potential to promote Picasso globally with their partners as an important tool to support the growing demand of non-invasive interventional cardiology applications.

Commenting on this announcement, Alfredo Garcia, CEO CathMedical:

“Rhesus Healthcare and its sister companies have an excellent track record in the healthcare industry, with important and innovative product solutions as an add-on to Picasso, which is unique compared to our competition. Through this partnership, we are expanding our presence and product portfolio rapidly in the Global medical systems market with important innovative solutions and concepts. “Picasso” is a prime example of the global cardiology interventional needs, cost efficiency, innovation and productivity”.

The global activities for Picasso are coordinated from its head office in Douglas, Isle of Man, Madrid (Cathmedical) Shanghai (Rhesus-3F Medical Systems) and Hong Kong.
