

RSNA 2013: Calgary Scientific Unveils New ResolutionMD Functionality

Calgary Scientific Inc., a company known for creating transformative technology for the medical industry and beyond, announced updates to ResolutionMD that will be premiered at this year's RSNA, at booth 5509.

ResolutionMD is an enterprise-wide image and report viewing solution, providing one simple interface for secure, real-time information access for practitioners from multiple archives.

ResolutionMD is accredited by the FDA for diagnosis on web and iOS mobile devices, and was first to be cleared for Android devices earlier this year.

The new functionality enables even quicker and broader access to valuable information by:

- Offering a view of the entire patient record across disparate systems and geographies, including additional support for non-DICOM data types
- Enabling seamless integration with any system currently in use, optimising existing infrastructure
- Facilitating secure notification and instant collaboration capabilities that connect practitioners regardless of their location or device they are using

"Calgary Scientific continues to demonstrate its leadership in enterprise and mobile image viewing for healthcare," said Pierre Lemire, President and CTO with Calgary Scientific. "I think RSNA attendees will be excited to view our new capabilities as they address the challenges healthcare organisations have in quickly accessing images and other patient information across their enterprises."

ResolutionMD enables doctors to securely view patient images and reports from a wide array of computers and mobile devices, collaborate with other practitioners and produce high-quality medical diagnosis from any location. The FDA cleared, Health Canada licensed and CE marked mobile medical diagnosis software never transfers highly sensitive data to the device, as is the case with other solutions. The enterprise-wide viewing solution integrates seamlessly with multiple healthcare IT systems, optimising existing infrastructure from any array of manufacturers. ResolutionMD is published in twelve languages and currently installed in leading healthcare institutions around the world via a network of more than thirty-five world class healthcare partners.
