

#RSNA2014: TeraRecon Highlights iNtuition and iNteract+

TeraRecon, a leader in advanced visualisation and enterprise medical image viewing solutions, highlighted major implementation and innovations of its iNtuition advanced visualisation solution combined with its new iNteract+ interoperability capabilities, at the 100th Scientific Assembly and Annual Meeting of the Radiological Society of North America (RSNA) in Chicago.

The latest version 4.4.12 of iNtuition and iNteract+ is a complete solution capable of performing many mission critical image viewing workflows, such as:

- Universal Viewing and Image Sharing for EMR image-enablement and beyond
- Deconstructed PACS for future-proof PACS replacement or PACS-on-PACS
- Advanced Visualisation for extending decision support tools

iNtuition and iNteract+ are designed to achieve these goals, while seamlessly leveraging legacy PACS systems and Vendor Neutral Archives immediately. The entire TeraRecon system and all of the available partner integrations leverage open-standards communications.

Steven Campbell, IS Manager of Diagnostic Applications for Piedmont Healthcare, said "TeraRecon quickly implemented an enterprise advanced visualisation solution across our five hospitals and simultaneously deployed the zero-footprint viewer to image-enable our Epic EMR, leveraging our PACS-independent VNA. In our comprehensive approach to enterprise image enablement, we have included everything from image sharing and remote visualisation workflows to innovative imaging informatics initiatives such as a de-coupled PACS environment. TeraRecon is much more to our organisation than a technology provider. They are true partners with our physicians and the IT organisation alike."

Dr. Marc Wallace, Neuroradiologist and Director, Imaging Informatics, Allegheny Health Network, said "Our organisation is in a replacement cycle and chose to pursue a deconstructed PACS due to the flexibility it provides us over time. We have leveraged TeraRecon advanced visualisation solutions across our enterprise for many years. The capabilities of iNtuition and iNteract+ working together allowed us to pursue deconstructed PACS with less risk, and equally importantly, with the best eye toward collaborative multi-specialty workflow."

Jeff Sorenson, TeraRecon senior vice president. "We are proud to work with innovators like Piedmont Healthcare and Allegheny Health Network to set new standards in imaging workflow, simplicity and effectiveness. At this year's RSNA, attendees can experience the remarkable flexibility of our 'morphable' viewing solution by seeing it work real-time in combination with many of the leading radiology worklist, vendor neutral archive, electronic content management and health information exchange technologies."
