
Sectra Cardiology Module Incorporated in US Healthcare Organization's Enterprise Imaging Solution

International medical imaging IT company [Sectra](#) announces that ProMedica is adding the Sectra Cardiology Module into its existing enterprise imaging architecture. Through integration with the Epic Cupid reporting module, physicians will have combined access to their patients' complete imaging history for both radiology and cardiology.

ProMedica's twelve hospitals and six ambulatory surgery centers in northwest Ohio and southeast Michigan provide 4.7 million patient encounters annually. All the facilities utilize Sectra PACS and, earlier this year, the Sectra VNA architecture was configured to prepare for the inclusion of cardiology and other non-radiology images. Cardiac catheterization and cardiac ultrasound images will be viewed in the Sectra PACS and archived in the Sectra VNA.

"ProMedica and Sectra have a long history of collaboration. The ability to easily access images from both radiology and cardiology will allow us to continue delivering excellent patient care and improve communication between disciplines," says Debi Brobst, VP of Applications at ProMedica.

About Sectra's enterprise imaging solution

Sectra's complete enterprise imaging offering is modular and supports the most image-intense departments—radiology, pathology, cardiology and orthopaedics. Being built on the same technical platform, customers can easily extend a departmental solution to create a comprehensive VNA and enterprise image management solution without major investments or the replacement of existing components.

Sectra at RSNA 2016

Meet Sectra at the ongoing RSNA trade show, booth #6113, and learn more about how Sectra supports radiology in exceeding the expectations of referring physicians and their patients. Read more and book a meeting at www.sectra.com/RSNA.
