

Siemens at the ESC 2011: Solutions for Sustainable Cardiovascular Care

Siemens Healthcare will present a range of solutions for sustainable cardiovascular care at the European Society of Cardiology (ESC) congress in Paris, France, under the motto "Are you ready for the long run?". This includes all modern imaging technologies, in-vitro diagnostics, IT solutions and consulting services. The numerous medical innovations in recent times show that modern cardiovascular care is in fast and constant change. Examples are novel minimally-invasive interventions, improved disease management in heart failure, innovative methods in atrial fibrillation ablation or the personalized medicine approach in cardiomyopathies. Siemens supports its customer as a reliable and innovative partner in mastering the challenges that accompany these changes. This also includes the question of how to implement emerging standards of care in clinical routine in the safest and most cost-effective way. The sustainable Siemens solutions enable cardiologists not only to make sound clinical decisions and provide safer procedures, but also address the growing economic challenges faced by today's healthcare systems. That is why these solutions show ways that increase operational efficiency.
