Siemens Healthineers Cloud Platform 'teamply' Awarded European Privacy Seal for Data Protection

The cloud-based platform “teamply”¹ by Siemens Healthineers, together with its applications teamply Dose, teamply Usage, teamply Protocols, teamply Images, and teamply Images Research, has been awarded the European Privacy Seal (EuroPriSe). The European Privacy Seal was first granted to teamply in 2016, and must be regularly renewed. The privacy seal in its current version relates to the expansions made in recent years to the range of functions the teamply applications offer, and now specifically checks whether the requirements of the EU General Data Protection Regulation (GDPR) have been satisfied.

From the start, teamply was developed in accordance with the principle of “Data Protection by Design and Default” and the level of transparency this principle implies. The Privacy Seal confirms that users who utilise teamply as instructed by Siemens Healthineers can work with the cloud platform and the above applications in full compliance with the GDPR.²

With more than 4,000 healthcare institutions connected to teamply, it is one of the world’s largest cloud-based networks for physicians, medical professionals, and decision-makers in the healthcare industry. Over 18,000 modalities from different vendors deliver data directly to the cloud platform.³ The teamply applications for performance management help healthcare providers, for example, support in making rapid, sound decisions based on transparent performance data.

That means it is possible to evaluate the number of imaging examinations just as easily as the radiation dose used in scans, or the capacity utilisation of devices, rooms, and resources in a given department, down to individual devices and patient examinations. teamply simplifies the reporting process and highlights where workflows need to be adjusted. In addition, users can connect via teamply, sharing data to obtain comparisons and benchmarks and easily exchanging images and reports.
