
TeraRecon Introduces Overlay PACS Viewing at RSNA 2015

TeraRecon (www.terarecon.com), a leader in advanced visualization, enterprise medical image viewing and image sharing solutions, highlights a new strategy for enterprise imaging called Overlay PACS™ Viewing at RSNA15 Annual Conference, held at McCormick Place, Chicago, Illinois, November 29th-December 3rd, 2015. Booth #6713.

RSNA15 attendees will have the opportunity to experience TeraRecon's full viewing platform including their industry leading advanced visualization, universal viewing, image sharing and Overlay PACS solutions. Uniquely positioned as an independent viewing provider with deep roots in multi-specialty clinical tools, TeraRecon is helping customers achieve a broad range of enterprise imaging and long term infrastructure goals. Being vendor-independent from PACS and VNA, TeraRecon is solely focused on the physician experience and can help customers transition toward a centralized approach to medical image viewing and sharing, while working in the current reality of disparate image archives.

TeraRecon is proud to highlight a recent Overlay PACS Viewing implementation with Imagerie Paris Nord Sarcelles (IPNS) of Sarcelles, France. Dr. Robert Lavayssière, radiologist at IPNS, said, "Our objective was to find a solution to deal with an increase in our study volumes and a decrease in the number of radiologists. Our existing partners were not able to offer us what we expected, which was an image viewing cockpit that is accessible to the whole department, whether we are in the department or outside of it. What we've now managed to do with TeraRecon is to read all our images from any viewing station and access this from the radiology department management software, all on the same interface."

"What our customers appreciate most about TeraRecon is that we work with them strategically, and in true partnership," said TeraRecon President, Jeff Sorenson. He continued, "If an enterprise imaging project is on the horizon for your organization, our viewer is capable of doing more. From simple enterprise viewing to advanced 3D imaging, our iNtuition solution can be layered across your enterprise and adapted to a wider range of clinical needs."

TeraRecon is a must-see at RSNA15. Their complete range of image viewing and sharing solutions can be seen on their all-new website at www.terarecon.com.
